True
REFRIGERATION

Dazzling Display Refrigeration

Our commercial glass door fridges are designed for maximum visibility and food safety, making them ideal for the grab-and-go, retail, and supermarket sectors.

Built to maintain optimal temperatures, these retail units ensure that packaged food and beverages stay fresh, appealing, and ready for immediate sale.

Put your Freshness on Display

Temperature is at the heart of every True product, and our glass door cabinets are no exception.

Even before legislation mandated temperature testing for glass door refrigeration, True display products were already designed to maintain the same strict food-safe temperatures as our world-leading foodservice products.

Demonstrating faster pull-down times and ideal temperatures for the merchandising of packaged food, and guaranteeing colder bottles every time, True is the display cooler of choice for operators around the world.

Sustainability

Our Natural Refrigerant initiative aligns perfectly with operators focused on responsible environmental practices. True "HC" products provide comparatively quicker temperature recovery and significantly reduce energy consumption.

Support

All True products are covered, as standard, by an industry-leading 7 Years Parts & Labour Warranty. We provide premier customer service and after-sale support to our clients locally, ensuring guaranteed peace of mind.

Temperature

We are world leaders in commercial refrigeration built on a reputation that every True product must be able to maintain consistent, accurate and safe storage temperatures, even in the most demanding of foodservice environments.

Energy Efficiency

Today, every serious operator has targets around sustainability, including energy management programmes to reduce wastage. By choosing the latest, most efficient equipment, energy consumption can be considerably reduced.

Disclaimer:

7 Years Parts & Labour Warranty applies to products sold through distributors in Mainland Europe and UK. Standard warranty coverage varies in other regions.

Did you Know?

Since March 2021, glass fronted refrigeration sold in Europe and the UK has been required to meet Minimum Energy Performance Standards and carry a label stating energy consumption.

Consumers will be familiar with the “letter grade” labelling found on many electronic products sold throughout Europe, including washing machines, domestic refrigerators, lighting and televisions. Since 2016, some types of professional refrigeration have also been required to have labels, allowing operators to more easily benchmark and compare running costs of similar products on a like-for-like basis.

The Energy Labelling Regulation was extended in 2021 to also require glass fronted units to require labels.

At the same time, a new style label was also introduced featuring a scannable QR code linking to the European PProduct database for Energy Labelling (EPREL), a depository for further product information and proof to the consumer that product performance information claimed by the manufacturer has been verified as correct.

‘Refrigerating Appliances with a Direct Sales Function’ versus ‘Beverage Coolers’.

When registering a glass fronted product for sale on the EU or UK market, manufacturers are now required to select one of two categories which their product is intended for.

The ‘Refrigerating Appliances with a Direct Sales Function’ product category includes glass door and “doorless” multideck retail coolers and freezers, the types of product typically used in retail environments. The applicable test standard (EN 23953) ensures the product meets performance and energy standards, maintaining consistent food-safe temperatures required of a modern retail merchandising product.

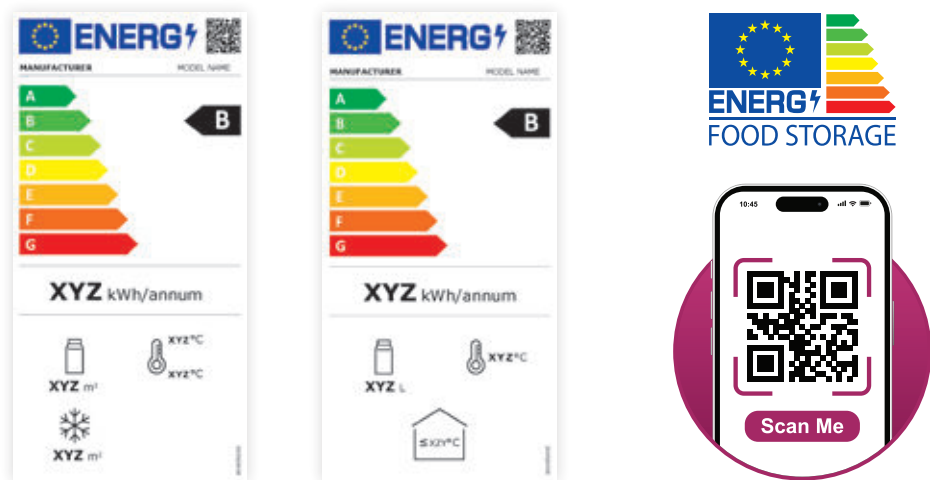

There is also a second category definition applicable to glass fronted refrigerators, specifically for ‘Beverage Coolers’. It may seem obvious from the name that this type of product is not intended or tested to hold perishable food goods, but this becomes less obvious when comparing labels for the two types of product.

The two labels are virtually identical, despite the huge difference in intended use. It is the prerogative and responsibility of the consumer to understand the difference and ensure the correct product is purchased.

Can you Tell the Difference?

True's wide range of glass fronted refrigeration products are ALL designed, tested and approved for the retail merchandising of packaged food products under the 'Direct Sales Function' category.

We do not manufacture products specifically for beverage merchandising, though some operators do prefer the superior pull-down and colder holding temperatures of our products for this application.

The label on the left is applicable to products categorised as 'Refrigerating Appliances with a Direct Sales Function', i.e. food merchandising products. Whereas, the label on the right indicates that the product has been tested and verified as a 'Beverage Cooler', suitable only for the merchandising of soft drinks.

Although the labels look very similar, the testing procedures for the two product types are completely different, and as such, the kWh/annum data should not be compared like-for-like, furthermore any operator intending to store/display perishable goods, such as food items or milk should be extra vigilant that they do not accidentally buy a product intended for drinks only.

Verification with EPREL.

In order to assist consumers in confirming that the information published by a manufacturer about their products can be trusted, energy labels for glass door products feature a QR code which links through to a corresponding page on the European PProduct database for Energy Labelling.

Before a product can be placed on the market, it must first be evidenced that it meets the current required standard, and only then is a QR code to a product page on EPREL granted. If this cannot be found, then there is no guarantee that the product meets requirements to be lawfully sold on the European or UK markets.

Glass Door Foodservice T-Series

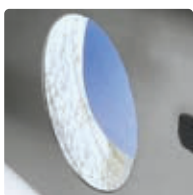

True's industry leading foodservice storage product, T-Series, also offers a number of specifications in glass door, for the ultimate in product temperature and cabinet durability, combined with effective product display.

Glass Door Foodservice T-Series

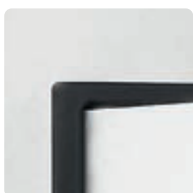

Best in Food Preservation

Digital control for state of the art temperature precision, and environmentally friendly R290 hydrocarbon system.

Zero ODP/GWP Insulation

Our high density polyurethane insulation that has zero Ozone Depletion Potential and zero Global Warming Potential.

Lifetime Guaranteed

T-Series door handles and torsion-type self closure system are guaranteed for the lifetime of the product.

True RCU Technology

Our Patented feature to help to reduce debris build-up on the condensing coil.

Glass Door Foodservice
T-23G-HC-FGD01

View more of our T-Series
truerefrigeration.ch/t-series/

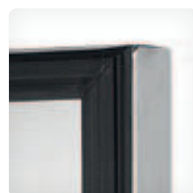

Heavy Duty Shelving

We manufacture our own heavy duty PVC coated shelves at True, adjustable to maximise usable capacity.

Forced-Air Refrigeration

A vented back wall panel and floor rack assists even distribution of air throughout the cabinet, for uniform temperatures.

Positive Seal

A torsion-type self closure system and "Positive seal" magnetic door gaskets help maintain energy efficient operation.

Bottom Mounted

Our uprights position the compressor and coil in the coolest, least greasy kitchen area for better efficiency.

Specification & Options

- Split door options: half solid + half glass or two half glass
- Frosted glass options
- Cabinet exterior and interior colour options
- “Pass-thru/Rear-load” options
- Door locks as standard (excludes T-15G model)

Model	T-11G-HC-FGD01	T-15G-HC-FGD01	T-23G-HC-FGD01	T-49G-HC-FGD01

Annual Energy Consumption (kWh)	562	802	602	1450

What is True “Low-E” Glass?

True Refrigeration’s glass door products feature low emissivity, double pane thermal insulated glass, which we manufacture ourselves in-house.

Emissivity is the process of reflecting UV and infrared light, effectively keeping heat from entering the refrigerator.

Microscopically thin transparent coatings are combined with an argon gas insert, placed between the panes to provide a better thermal break, making our glass more energy efficient, while providing high product visibility.

Glass Door Foodservice TGN

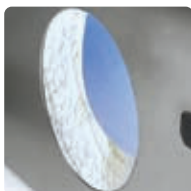

The new TGN's are 2/1 Gastronorm compatible upright products, featuring the latest in energy efficient refrigeration technology and unique features like our "E" shaped interior slide system.

Glass Door Foodservice TGN

Best in Food Preservation

Digital control for state of the art temperature precision, and environmentally friendly R290 hydrocarbon system.

Zero ODP/GWP Insulation

Our high density polyurethane insulation that has zero Ozone Depletion Potential and zero Global Warming Potential.

Metal Handles

TGN units feature sleek, heavy duty, metal door handles.

True RCU Technology

Our Patented feature to help to reduce debris build-up on the condensing coil.

Glass Door Foodservice
TGN-1R-1G-HC

View more of our TGN
truerefrigeration.ch/tgn/

Maximise Usable Space

Our unique "E" shaped slide system accommodates both a wire shelf and 2/1 or 1/1 GN pans to make full use of the internal space.

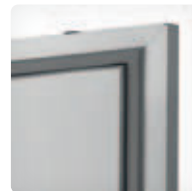

Forced-Air Refrigeration

A vented back wall panel and floor rack assists even distribution of air throughout the cabinet, for uniform temperatures.

Reversible Opening

TGN unit doors are right-hinged as standard, but opening can be reversed in the field.

Enhanced Thermal Break

TGN's feature thicker than standard insulation and a semi-rebated door design, creating an improved thermal break to enhance energy efficiency.

Specification & Options

- Stainless steel exterior with aluminium sides
- Stainless steel floor with coved corners
- Bottom-mounted refrigeration using eco-friendly R-290 refrigerant
- Electronically commutated fan motors for efficiency and consistent airflow
- Self-cleaning condenser coil with reverse fan cycle
- Automatic, time-initiated defrost system
- Self-closing, reversible doors with magnetic gaskets and locks

Annual Energy Consumption (kWh)	599	1316

Committed to Environmental Responsibility

We're committed to sustainability, with True producing several of the most energy efficient commercial refrigeration products currently available on the market.

We recognise that it is our responsibility to encourage and support our customers in selecting products that are both sustainable and environmentally friendly. We strive to continually review and improve all aspects of our processes to minimise negative environmental impact and deliver better commercial refrigeration products.

Glass Door Undercounters TUC

TUC's are True's all-purpose range of undercounter fridges, also featuring a number of glass door options, ideally suited to applications such as cafés and coffee shops.

Glass Door Undercounters TUC

Best in Food Preservation

Digital control for state of the art temperature precision, and environmentally friendly R290 hydrocarbon system.

Doors & Drawers

True Undercounters are available in a wide range of sizes and build options, including glass doors and drawers.

100% Front-Breathing

TUC's require zero clearance to the cabinet sides and rear, for a seamless and fully built-in installation.

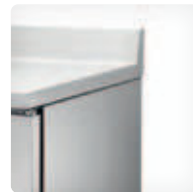

Reduced Height Option

Low Profile "LP" models reduce total height to 810mm for placement underneath counter fabrication.

Glass Door Undercounters TUC-24G-HC~FGD01

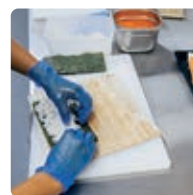

View more of our TUC
truerefrigeration.ch/tuc/

Worktop Options

Many TUC model sizes are also available with a 100 mm splash-back.

Stainless Steel Countertop

Ideal for under counter placement, TUC's also feature a fully finished one-piece stainless steel countertop prep surface.

Forced-Air Refrigeration

All TUC's, including the small footprint 24 models feature fully commercial grade 'forced air' refrigeration systems.

True RCU Technology

Our Patented feature to help to reduce debris build-up on the condensing coil.

Specification & Options

- Option of “Low Profile” castor reduces overall height to 810 mm
- Frosted glass options available
- Adjustable, heavy duty PVC coated shelves
- Exterior can be powder coated in a variety of colours to match any brand
- Interior powder coating colours available
- Locks available with SPEC3 upgrade option

Model	TUC-24G-HC-FGD01	TUC-27G-HC-FGD01	TUC-48G-HC-FGD01	TUC-60G-HC-FGD01
Doors	1	1	2	2

EEC	A	A	B	B
Annual Energy Consumption (kWh)	489	458	682	1102

What is the SPEC3 option?

The SPEC3 product enhancement package is available on True undercounter, worktop and prep table products. SPEC3 features a number of build and aesthetic upgrades over the standard product, including:

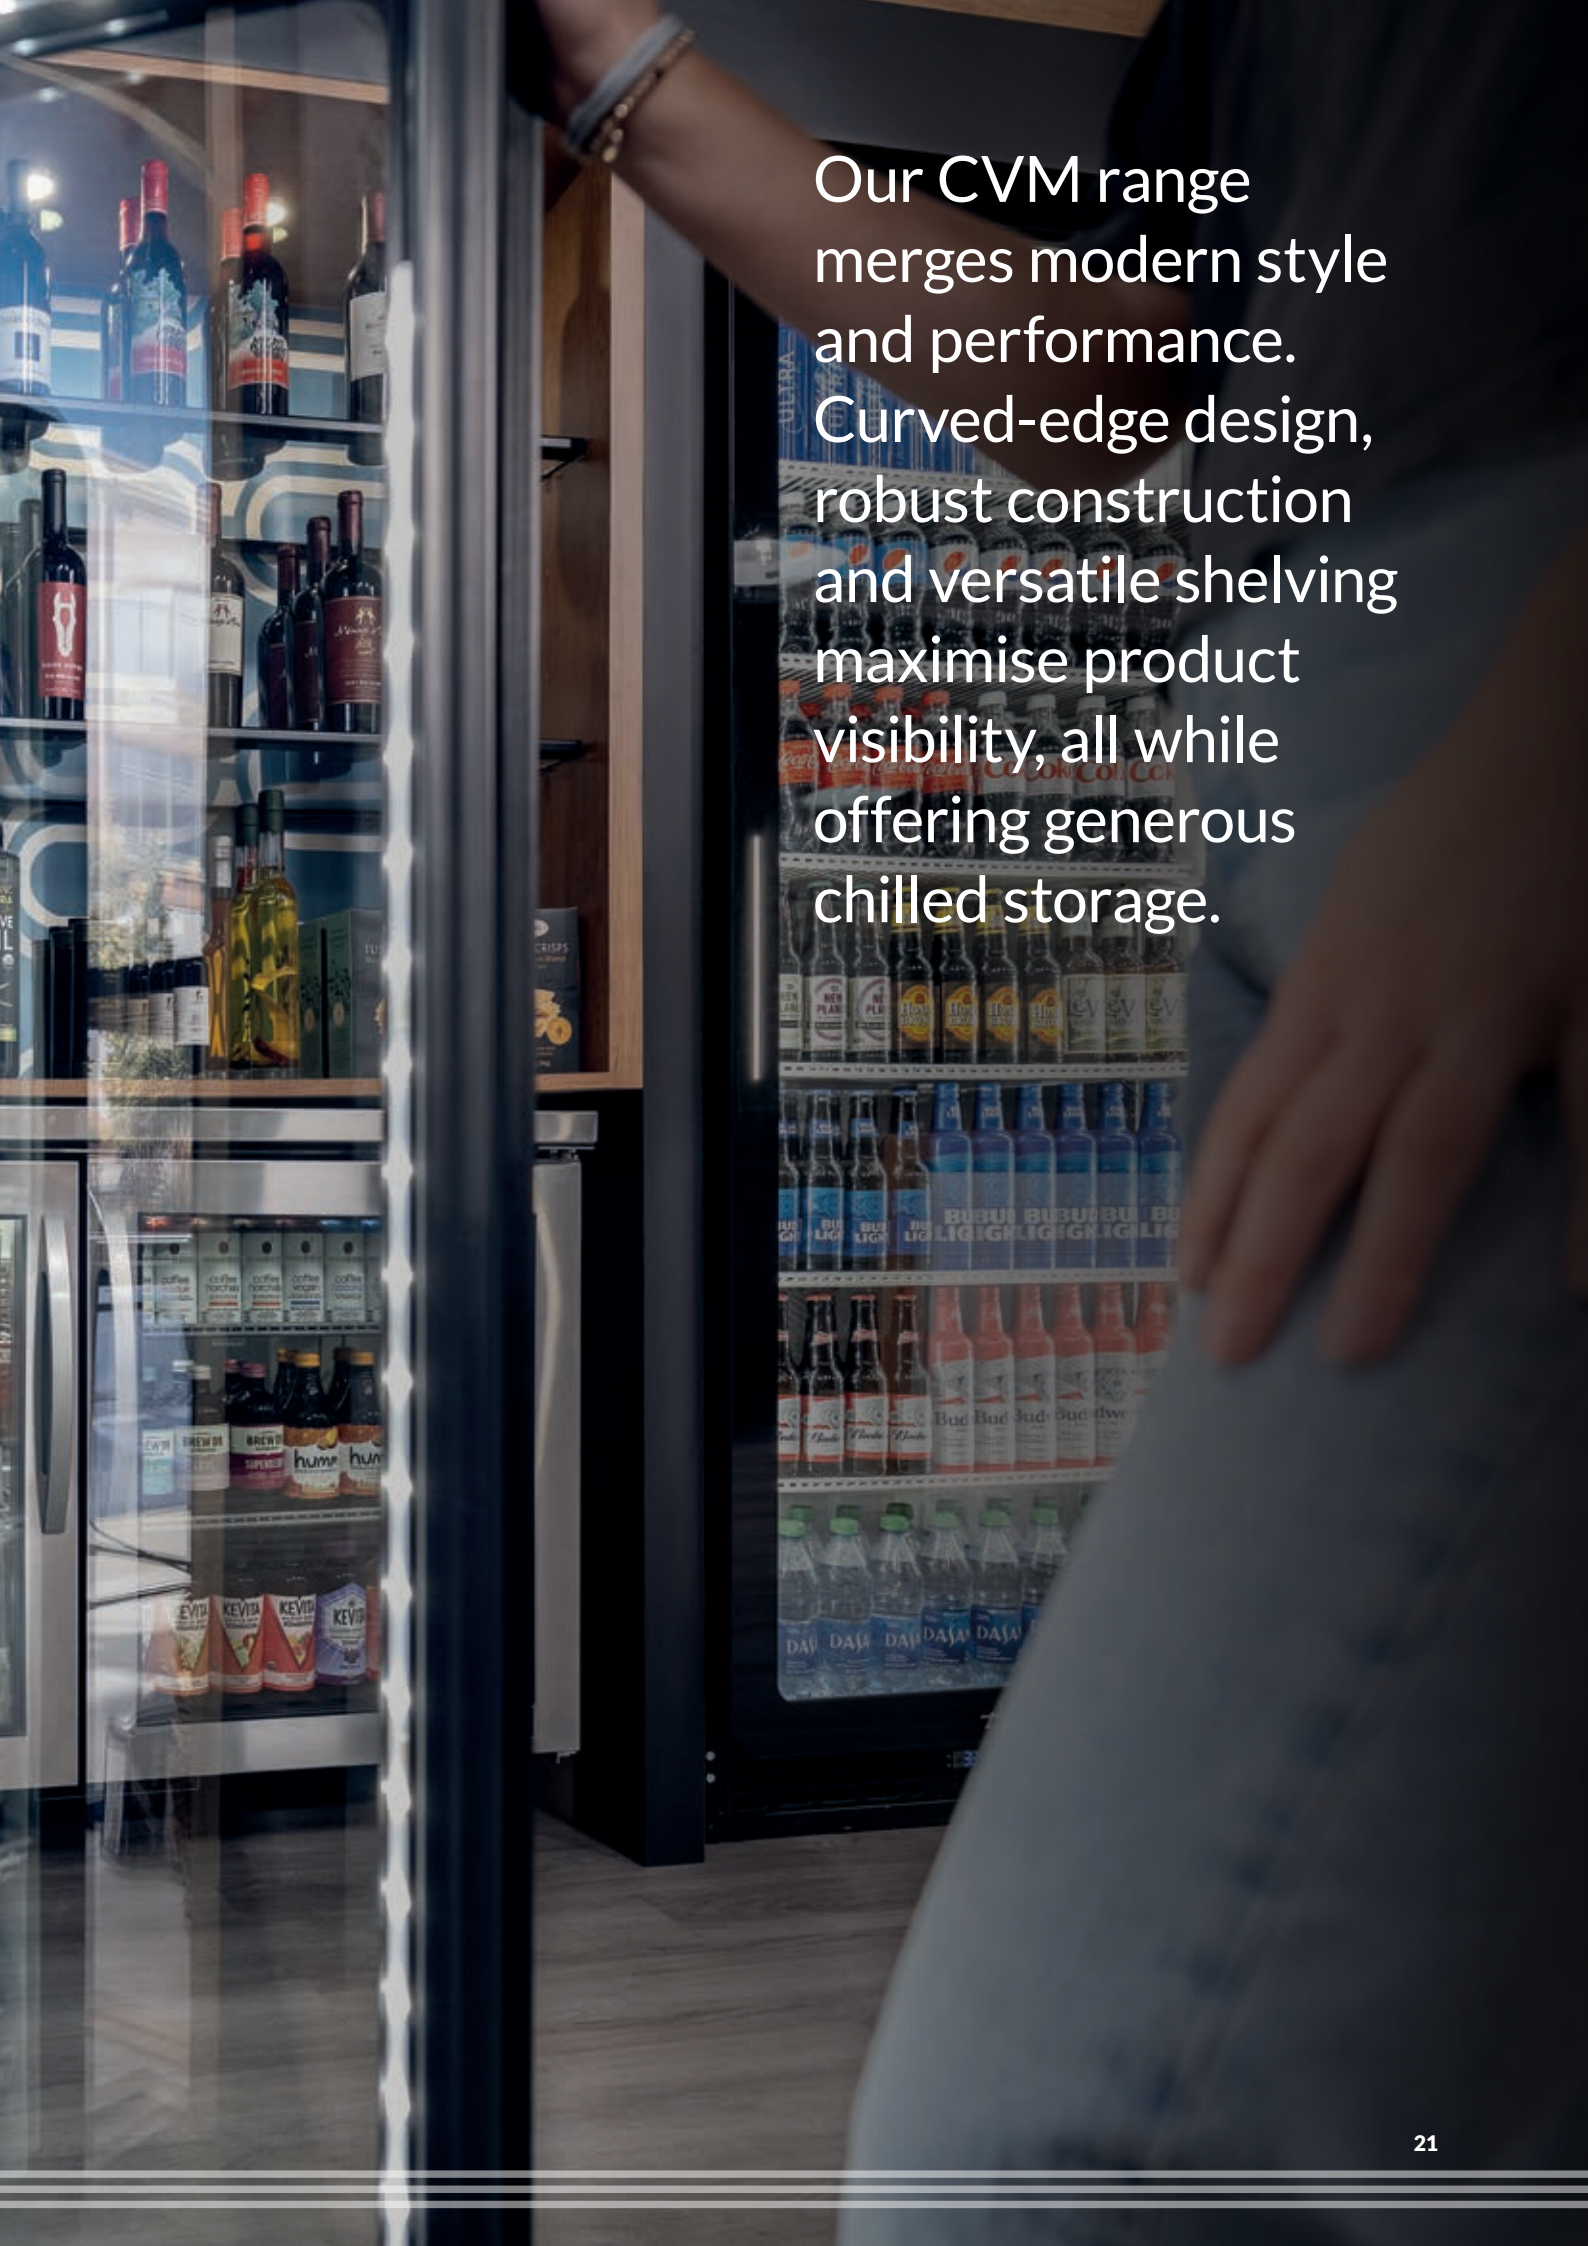

- Higher gauge construction materials for greater durability
- Lifetime guaranteed heavy duty metal door handles
- Door/ Drawer locks on all models

Find out more about SPEC3

Contemporary Visual Merchandiser CVM

A person's hand is shown reaching into a modern, curved-edge refrigerator. The refrigerator is filled with various beverages, including bottles of wine, beer, and soft drinks. The interior shelves are well-lit, and the curved edges of the shelves and door are visible. The overall design is sleek and modern.

Our CVM range merges modern style and performance. Curved-edge design, robust construction and versatile shelving maximise product visibility, all while offering generous chilled storage.

Contemporary Visual Merchandiser CVM

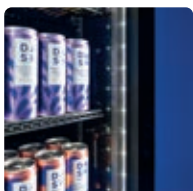

Merchandising Redefined

The CVM utilises a sleek and modern aesthetic with curved-edge door design.

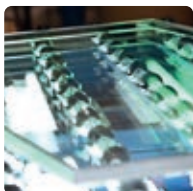

Illuminated Handle Position Indicator

CVM features an illuminated handle position indicator for ease of opening, whatever the environment.

Dazzling Displays

CVM includes bright LED lighting that is safety shielded, for the most illuminating of retail displays.

Low-E Glass

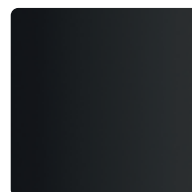

"Low-E", double pane thermal insulated glass for improved energy efficiency.

Contemporary Visual Merchandiser CVM-13-HC~EGC01

Heavy Duty Shelving

We manufacture our own heavy duty PVC coated shelves at True, adjustable to maximise usable capacity.

Tough Materials

Non-peel or chip black powder coated cold rolled steel; durable and permanent.

Built-In Handle

The CVM contains a built-in handle that allows for easy door opening from the top or the side.

Left-Hinged Door

Left-hinged door options are available across the CVM model range.

Focused on Quality & Reliability

We build our equipment to perform day after day, year after year. We're so confident in fact that we provide a fully comprehensive five-year parts and labour warranty on all products.

True stands apart from other refrigeration manufacturers by fully owning our manufacturing processes, doing as much as possible ourselves in-house to ensure the total quality of the finished product that we pass on to you. Through continuous investment in the latest technologies, our vertically integrated approach allows us to design and produce our equipment from scratch, including our own shelving, our own glass door inserts, even our own LED lighting.

Doors Save Energy

Multidecks aka open-air merchandisers are a preferred cabinet option for many grab-and-go and QSR operators, but the lack of any solid barrier between the cooled interior and warmer exterior temperatures means they are much less energy efficient than an equivalent refrigerator with doors.

True's TVM is designed to bridge this gap, retaining a high level of product visibility whilst massively reducing the amount of energy consumed, providing significant cost savings to the operator.
